DETAILED ACTION

1. This action is responsive to communications: application, filed on 10/30/00.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-6, 9-15, and 18-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Unger et al., US# 5,991,713.

As per claims 1-2, Unger et al. teaches "identifying said data elements in said document; compressing only said data elements in said document using a compression algorithm" (see col. 8, lines 7-66).

As per claims 3-4, Unger et al. teaches "inserts said identifier in a root node tag element" (see col. 6, lines 3-67).

As per claims 5-6, Unger et al. teaches "transmitting said compressed document" (see co. 8, lines 6-34).

As per claims 9-10, Unger et al. teaches "XML document" (see col. 5, lines 1-12).

As per claims 11-15, these claims are rejected on grounds corresponding to the arguments given above for rejected claims 1-6 and are similarly rejected.

As per claims 18-21, these claims are rejected on grounds corresponding to the arguments given above for rejected claims 1-3 and are similarly rejected.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 7-8 and 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Unger et al. in view of Dietz, US# 6,175,820 B1.

As per claims 7-8, Unger et al. does not teach "generated in real-time by a speech recognition system." Dietz teaches "generated in real-time by a speech recognition system" (see abstract). It would have been obvious to one of ordinary skill in the art at the time of the invention for one of ordinary skill in the art to have combined the teachings of Unger with Dietz above, because using the steps of "generated in real-time by a speech recognition system" would have given those skilled in the art the tools to convert human noise into text data corresponding to the noise. This gives users the users the ability to speak words or phrases into an electronic device and have those corresponding words and phrases converted to text data on an electronic screen.

As per claims 16-17, these claims are rejected on grounds corresponding to the arguments given above for rejected claims 7-8 and are similarly rejected.
